

PROOF2PAY AI

Agentic Job Completion & Billing Readiness

Finish the job. Prove the job. Get paid.

An evidence-to-billing intelligence layer for B2B field-service teams.

HACKATHON MVP

IBM Bob + MCP + Langflow

The job is complete. So why can't finance bill?

Field completion and billing readiness are not always the same state.

FIELD

"Job selesai, Pak."

Technician sends short notes, photos, and attachments after service.

REPORTED COMPLETE

The handoff gap

- Customer sign-off missing
- Test evidence ambiguous
- Service report not ready
- Admin must chase people/files

FINANCE

Not billing-ready

The problem is not whether the technician is done. The problem is whether the completed work can be proven.

Finished != Billable

Evidence is scattered. Readiness is unclear. Follow-up is manual.

1

Fragmented evidence

Notes, photos, checklists, files, readings, signatures and reports can live in different places.

2

Unsupported claims

"Tested" in a technician note does not automatically prove a critical acceptance requirement.

3

Manual reconciliation

Someone must compare requirements with evidence and decide what is still missing.

4

Manual chasing

Operations follows up with technicians/customers, then re-checks the case before billing.

Product opportunity Turn a completed job into a traceable evidence decision - then resolve the gaps.

Published evidence for the workflow problem

Indonesian AC-service cases document paper records and repeated manual checking.

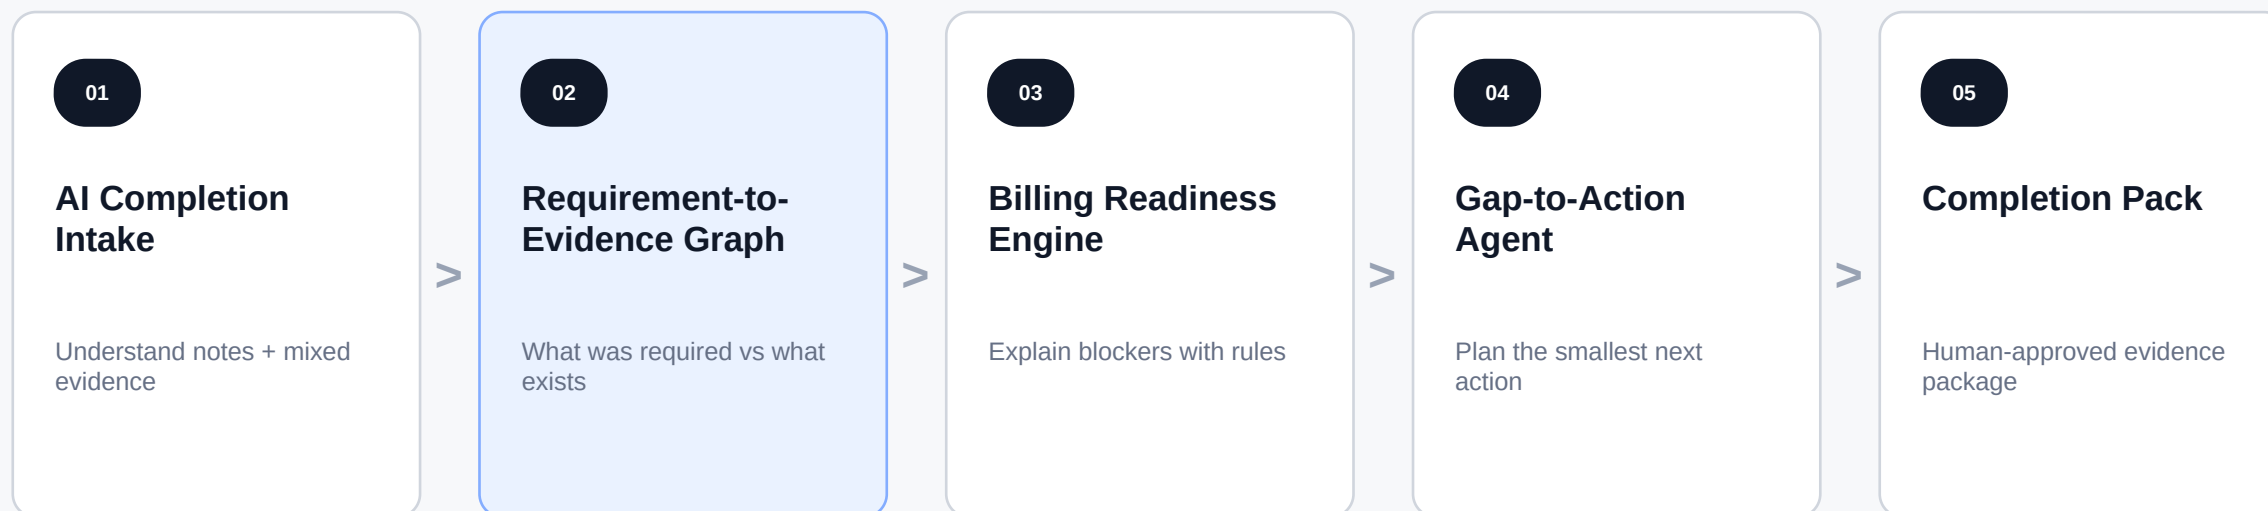

CATEGORY EVIDENCE	ServiceTitan	Forms can capture signatures, checklists, photos and PDFs; closeout can include required documentation.
STATE EVIDENCE	ServiceM8	Completed jobs can enter an Awaiting Approval stage before invoice approval/sync.
LOCAL STUDIES	Local AC service	Published cases report handwritten logs, misplaced receipts, and repeated administrative checks.

Still unvalidated: prevalence, average delay, willingness-to-pay, and best first vertical in Indonesian SMEs.

Sources: ServiceTitan, ServiceM8, UNAMA, BSI and UKDW repositories. Accessed 28 Sep 2026.

PROOF2PAY is an Evidence-to-Billing Intelligence Layer.

It does not replace dispatch, CRM, FSM, ERP, accounting, or payment rails.

Core promise

What was required? What proof exists? What blocks billing? What should happen next?

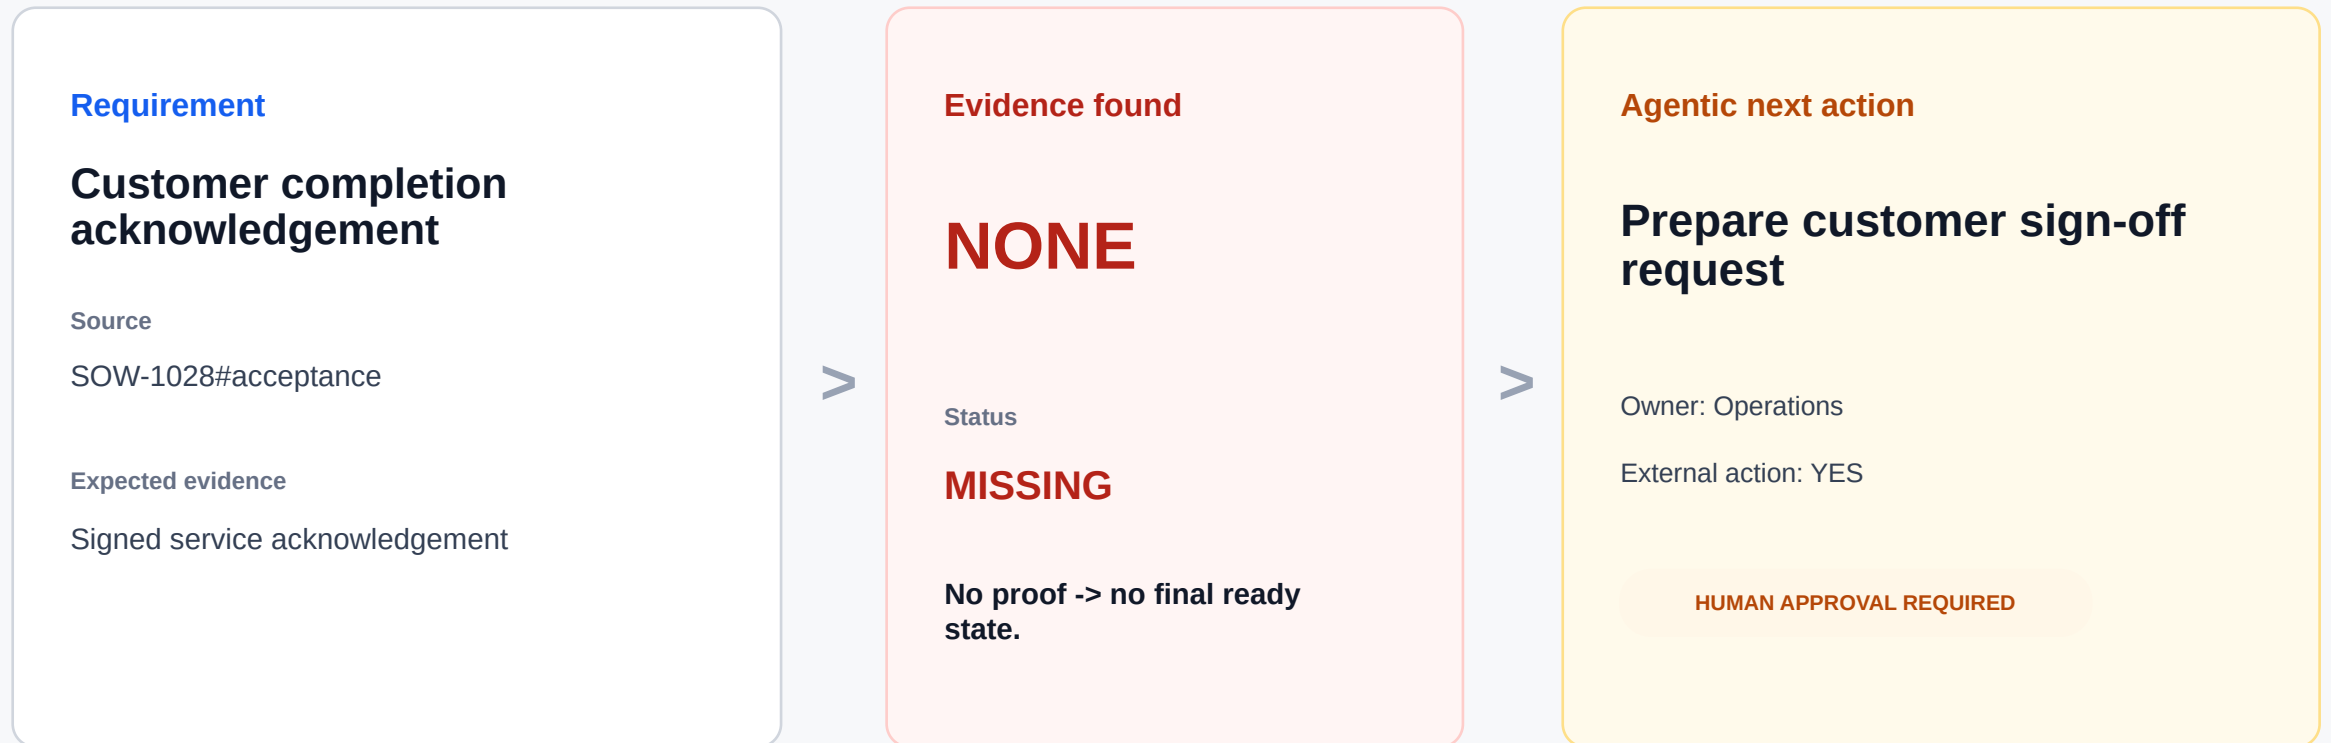

WO-1028: reported complete, but still blocked.

Synthetic HVAC preventive-maintenance case.

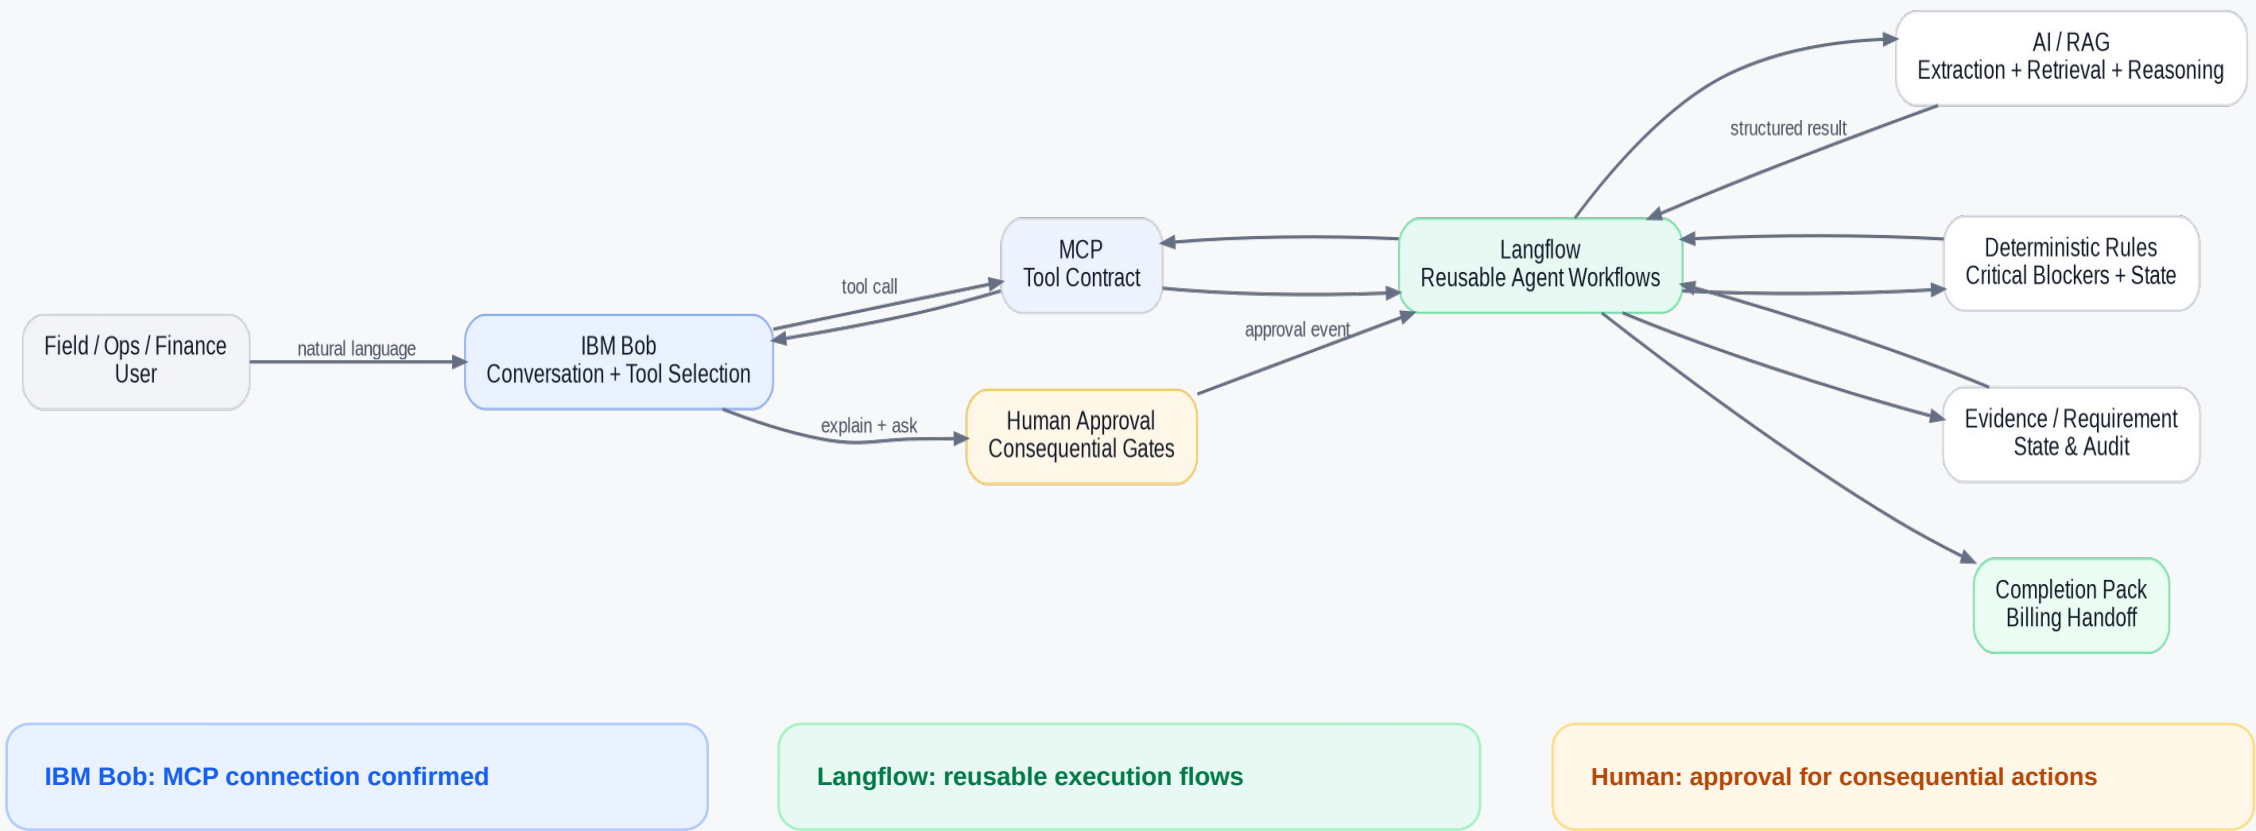

JOB	WO-1028	FIELD STATUS	REPORTED COMPLETE	BILLING READINESS	BLOCKED	PROGRESS	74%*	*UX progress only
MISSING	Customer completion acknowledgement		Expected signed/recorded acceptance; no evidence found.					
AMBIGUOUS	Post-service cooling performance		Technician claim exists; measurable supporting result is not linked.					
MISSING	Final service report		Generate draft only after verified facts and approval.					

Synthetic evidence is labelled. Missing items stay blocked until a person reviews the pack.

Reason over evidence - not just collect files.

AI where useful. Rules where critical. Humans where consequential.

Langflow MCP tools are connected. Bob calls await verification.

Key technical rule: tool descriptions are business contracts - narrow names, stable inputs, structured outputs, explicit non-goals.

The system assists with evidence. It does not manufacture proof.

AI

- Interpret notes / documents
- Extract completion claims
- Retrieve requirements
- Propose evidence matches
- Explain ambiguity
- Plan next action

RULES

- Critical blocker policy
- Valid state transitions
- Approval requirements
- Required / optional flags
- Presence/date checks

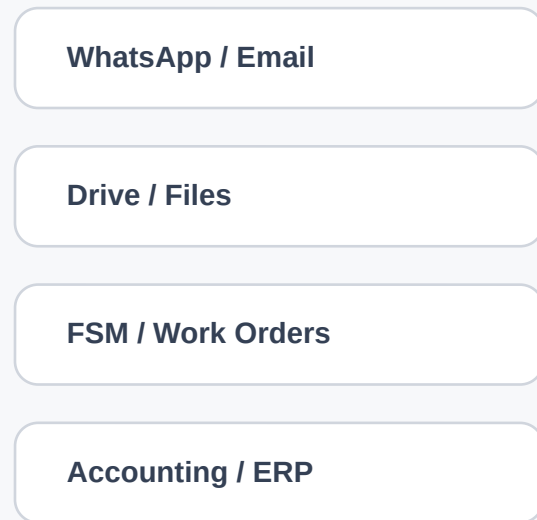

HUMAN

- Confirm final readiness
- Approve customer-facing action
- Review ambiguous evidence
- Approve external completion pack
- Authorize downstream billing

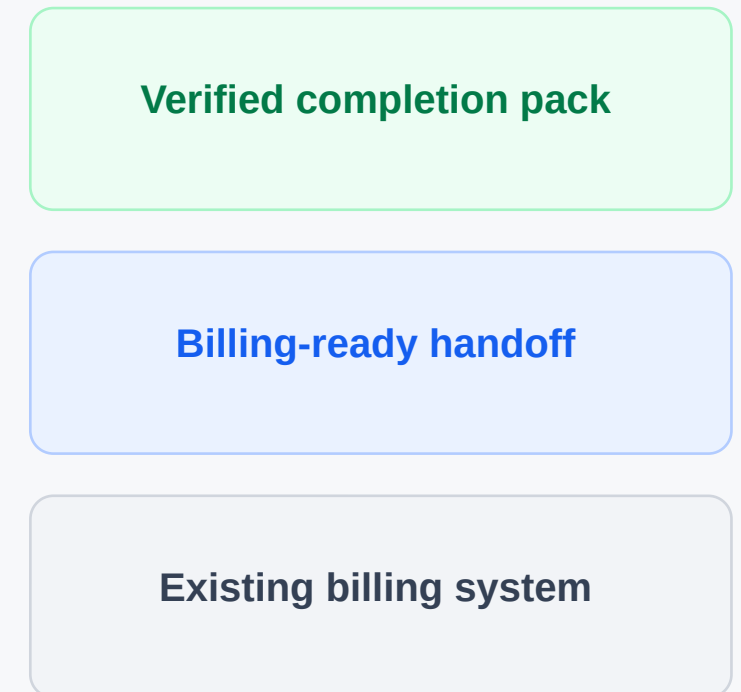

Never: invent evidence, authenticate signatures, issue invoices, move money, or bypass unresolved critical requirements.

Do not replace the stack. Fix one expensive handoff extremely well.

Existing stack

Outcome

Competitor category examples: ServiceTitan and ServiceM8 official product/help documentation.

Start narrow. Prove the workflow. Expand through templates and integrations.

Business model hypothesis

- B2B SaaS
- Tier by active field team / job volume
- Pro: integrations + custom templates + analytics
- Enterprise/API: governance + private integration

PRICING NOT YET VALIDATED

Expansion path

NOW	Hackathon	3 public HVAC records + synthetic browser demo
NEXT	Pilot	Consented user data + integrations + evaluation set
LATER	Scale	Vertical templates + multi-tenant governance + connectors

Source: NYC Parks AMPS work orders 2791739, 2792582, 2792861. Public records do not include billing proof.

Finished != Billable.

PROOF2PAY turns completed work into proven work - so billing can move forward with evidence, not assumptions.

Finish the job. Prove the job. Get paid.
