

PROOF2PAY AI - Competitive Analysis

Why this is not another Field Service Management platform

Positioning v0.1

Category reality

Established FSM platforms already support important field-service workflows. That is **market/category evidence**, not a reason to claim the space is empty.

Public competitor evidence

ServiceTitan

Official documentation supports forms containing equipment details, customer signatures, checklists, photos, and PDFs, along with closeout processes and required signatures/forms.

ServiceM8

Official documentation shows completed jobs can move through an **Awaiting Approval** step before invoice approval and can use customer signature confirmation for completed work.

Positioning

PROOF2PAY is not another FSM. It is an Evidence-to-Billing Intelligence Layer.

It can sit on top of an existing stack and focus on one high-value handoff.

Capability comparison

Capability	Full FSM	Manual stack	PROOF2PAY focus
Dispatch/scheduling	Strong	Weak	Out of scope
Checklists/forms	Strong	Ad hoc	Consume/integrate
File/photo capture	Strong	Scattered	Normalize/integrate
Invoice generation	Often strong	Accounting tool	Out of core scope
Requirement-to-evidence traceability	Product-specific	Manual	Core
Unsupported-claim detection	Product-specific	Manual	Core hypothesis
Explainable blocker graph	Product-specific	Manual	Core
Agentic gap resolution	Product-specific	Manual chase	Core
Human-governed overlay	Depends	Manual	Core positioning

Differentiation principles

1. Reason over evidence, not just collect it

The system distinguishes a claim from proof and explains exactly which requirement is unsupported.

2. Requirement-to-evidence graph

Traceability is first-class rather than hidden inside a generic ticket.

3. Blocker-to-action loop

The product proposes the smallest resolution action and re-validates after new evidence arrives.

4. Integration-first

Do not force the customer to replace scheduling, CRM, accounting, or established FSM tooling.

Competitive risk

Large FSM vendors can add AI evidence features. PROOF2PAY therefore needs to win through narrow workflow depth, integration flexibility, vertical templates, governance, and measurable time-to-billing-readiness improvement - not by claiming generic AI novelty.
