

PROOF2PAY AI

Agentic Job Completion & Billing Readiness Platform

Finish the job. Prove the job. Get paid.

IBM Bob + MCP + Langflow

Finished != Billable

A job can be technically complete while required evidence is still missing, ambiguous, or scattered.

1. THE PROBLEM

- Technician says the job is complete, but finance still needs trustworthy completion evidence.
- Manual reconciliation can involve notes, photos, checklists, readings, customer acknowledgement, work orders, and reports.
- The target handoff is field completion -> billing readiness, not generic invoicing.

2. THE PRODUCT

- AI Completion Intake for mixed field evidence.
- Requirement-to-Evidence Graph with source traceability.
- Billing Readiness Engine: READY / MISSING / INCOMPLETE / AMBIGUOUS / HUMAN_REVIEW.
- Gap-to-Action Agent with human approval for consequential actions.
- Completion Pack Generator using verified facts only.

3. DIFFERENTIATION

- Not another full FSM/ERP replacement; it is an Evidence-to-Billing Intelligence Layer.
- No opaque AI verdict: every conclusion links requirement -> evidence -> status -> next action.
- No proof -> no final ready state for critical requirements.

4. GOLDEN DEMO

- WO-1028 is reported complete.
- Bob asks Langflow to validate evidence through MCP.
- System finds missing customer acknowledgement, ambiguous cooling proof, and a missing final report.
- Agent proposes the smallest next action and requests approval.
- After new evidence is added, the job is revalidated and a completion pack is generated.

5. RESPONSIBLE AI

- AI interprets and matches evidence; deterministic rules control critical state transitions.
- Ambiguity becomes HUMAN_REVIEW, not fabricated certainty.
- AI cannot authorize invoices, move money, authenticate signatures, or invent evidence.
- External consequential actions require human approval.

6. VALIDATION STATUS

- Secondary research supports the completion/documentation/approval/billing workflow category.
- Primary validation for Indonesian B2B field-service SMEs is still pending.
- Prevalence, average delay, willingness-to-pay, and best first vertical remain hypotheses.

TECHNICAL PATH

User > IBM Bob > MCP > Langflow > AI + Rules > Result > Human

Truth rule: planned features stay planned until real exports, screenshots, tests, and Bob/MCP evidence exist.
